

South Atlantic Chapter  
Society of Wetland Scientists

**South Atlantic Chapter of the Society of Wetland Scientists Student Research Grant Program**  
(revised January 2015)

The South Atlantic Chapter of the Society of Wetland Scientists has established two (2) general research grant up to \$750/each to be awarded annually to undergraduate or graduate students (either Masters or Doctoral students) engaged in research that has direct applicability to the advancement of wetland science. Applicants must be students at an accredited university within regional boundaries of the South Atlantic Chapter and SWS members, and their research must occur within SAC boundaries as well. Applications will be judged on the scientific merit and innovative aspects of their research proposals. Grants are intended to aid but not to provide sole support of, student research. See the SWS Student Research Grants web page for further details (<http://sws.org/Awards-and-Grants/student-research-grants.html>).

For streamlining purposes, applicants must follow the rules and procedures of the SWS Student Grant Program, with the following modifications specific to the SAC Student Research Grants:

- Research must take place within the SAC boundaries (Florida, Georgia, North Carolina, South Carolina, Virginia, West Virginia, Puerto Rico, and the Virgin Islands).
- Students must submit a full application through the SWS Student Research Grants program and \*in additional\* the research proposal and CV/resume must be emailed as attachments to the SAC Awards Committee Chair David Bailey [[david.e.bailey2@usace.army.mil](mailto:david.e.bailey2@usace.army.mil)].
- In the text of your email, list your full name, institution and program, whether you are an undergraduate, masters or doctoral student, anticipated graduation date, and whether you are a member of SWS.

Application deadlines are the same as the SWS Student Grants Program, which vary each year based on the dates of the annual SWS meeting.
