

Hello Pensacola! How are your stem cells today?? :0)

Well - What is a stem cell? A STEM CELL is a MASTER CELL that has the ability to develop into many different types of cells in the body. i.e. muscle cells, blood cells, nerve cells, etc. Amazing!

When we are born we have lots of stem cells, but you will see by the chart they decline rapidly after the age of 12. By age 30 half of your stem cells are depleted. YIKES!

Let's talk about these Master Cells a bit more. They are also our body's first line of defense and as we age they decrease, so we don't heal as fast or recover from illness as quickly as we did when we were younger. I have actually had my very

own doctor say “well you can expect more aches and pains as you age, slower healing, slower recover – these things happen as you age” . Have you heard this? Well ... this does not have to be the case.

What are my options for increasing the stem cells in my body?

-1- Stem cell therapy involves the use of stem cells to treat or prevent disease or injuries. This procedure involves harvesting stem cells from the patient’s (own and already depleted) stem cells. Or from a donor (sometimes umbilical cord) and injecting them into the affected area. Usually, this procedure is costly and there is no guarantee that these procedures work 100% of the time.

-2- TA DA ... Presenting X39 – an all natural stem cell patch that uses organic crystals and activates the GHK-cu Copper peptides that then help reactivate and regenerate your very own stem cells. Nothing foreign goes in the body.

**WEARABLE LIGHT TECHNOLOGY**

Photo Bio Modulation

Photobiomodulation uses specific wavelengths of red and near-infrared light to help the body heal.

Photobiomodulation can stimulate, heal, regenerate and protect tissue that has either been injured, is degenerating, or else is at risk of dying.

LIGHT THERAPY

NOT A DRUG

David Schmidt and 10 years of studying stem cells and the copper peptide GHK-Cu has invented a wearable technology . This technology is all natural, has 3<sup>rd</sup> party

studies, is cost effective and is non-transdermal. How would you like a good night's sleep, pain relief, faster healing, brain clarity, more energy, and help with age related issues such as cognitive decline?

Next week we talk about pain relief but if you have any questions give us a call.
