NARI CotY Awards

BEFORE

Hail in New Prague is just what this Church needed to give their space new life. The congregation had a strong vision and our team is proud to have helped achieve it. Damage to the roof, siding, gutters and downspouts allowed for major changes.

DURING

There were three layers of shingles to remove. We needed four dumpsters!

It took 8 months to get this siding approved by insurance. It was well worth fighting for.

Midway through the project the decision to replace the brown soffit and fascia was made and you'll see what a difference that makes.

MATERIALS

The goal was a beautiful and modern building that would be able to stand against harsh Minnesota weather. Here's what we used to make that happen.

Roof

IKO, Dynasty, Granite Black

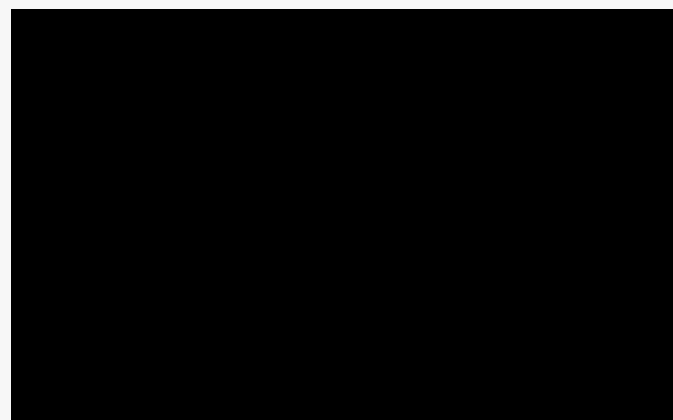

Lap Siding

EDCO, Entex, Single 8", Charcoal Gray

Vertical Siding

EDCO, Entex, Vertical 12", Driftwood Gray

Gutters, Downspouts, Fascia & Soffit

Norandex, Black

AFTER

Sleek and striking, this building makes an impact. The client is thrilled with the result and we are too.
