# THINKING ABOUT DIGITAL ACCESSIBILITY

This poster provides thinking points around digital accessibility. Accessibility continues to be a crucial part of everyday life, and the digital aspects are no exception. Digital accessibility needs can be seen in everything from website navigation, video streaming, webinar presentations, and much more.

WHERE TO GET STARTED

Visual Accessibility

- Contrast Checker: Tool to check your background and text for accessibility
- Descriptive Alt Text: Written description of images

Auditory Accessibility

- Closed captioning: Time-synchronized text to go along with video
- Transcripts: Text accompaniment to audio

Language Accessibility

- Translation Tools: Identifying content language can help screen readers
- Accessible Language: avoiding idioms, jargon, and other easily misinterpreted words to help a broad audience understand

User Experience

- Ease of Navigation: The ability to move through a website on different types of devices
- Screen reader: software that translates text and provides instructions on how to interact with a content on a screen
