How it works

In LCA's GIS app:
Operations field team identifies impacted customers based on event.

- Select event type
- Draw polygon
- Add details
- Alert Customer Care & Communications Team members
- Process pushes polygon to Notify & LCA website automatically

CIS-GIS-Notify system integration

Easy customer data extraction

The screenshot displays the Notify GIS interface. On the left, a dark sidebar contains navigation icons for Contacts, Message, Deliver, and Contact List. The main interface features a top toolbar with 'Create Filter' and 'Load Filter' buttons, a 'Buffer (Ft.)' input field, and an 'Attribute Selection' section with a '+ Condition' button. At the bottom of the sidebar, there are 'Save Filter' and 'Upload CSV' buttons, and a status bar showing 'Selected: 10' with counts for 'SMS: 9', 'Voice: 9', and 'Email: 10'. The main map area shows a street grid with numerous red crosshair markers. A specific polygon, representing a shopping center, is highlighted in green with a red border. A yellow text box is overlaid on the map with the text: 'Find the shape the Operations team defined.' The top right of the interface shows a dropdown menu for 'COA Water and Sewer Meters' and the user name 'Susan L. Sampson'. The bottom right corner of the map area includes the text 'v4.52.6 © 2023 GeoDecisions'.

Extract customer data from map & load into Notify call system

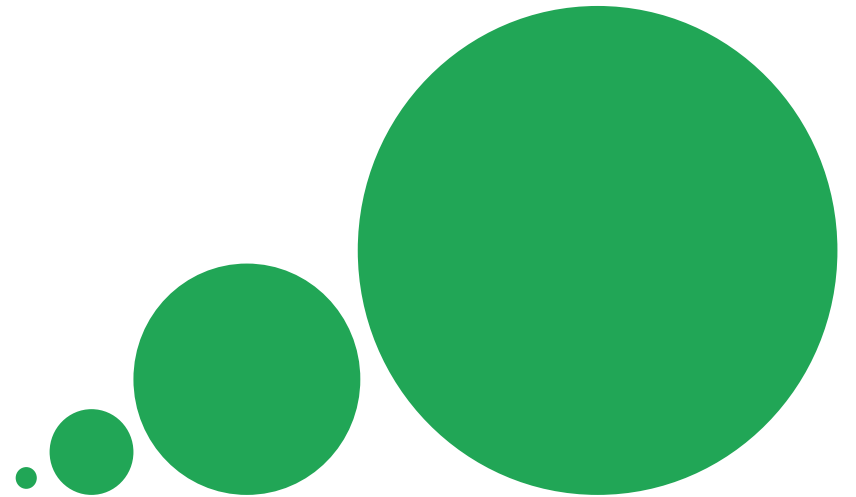

The screenshot shows the Notify web interface. On the left sidebar, the 'Contact List' menu item is highlighted with a yellow arrow pointing upwards. At the top of the main content area, the 'Export' button is highlighted with a yellow arrow pointing to the left. Below the 'Export' button is a table titled 'Contact List' containing customer data.

Other challenges & methods:

Depends on system size

- Door hangers
- Bottled water delivery
- Water filling locations
- Customer call-backs
- Social media response
- Regional agency support

Lehigh County Authority

THANK YOU!
