#### Table 3.18: Water Rights and Current Production compared to Current Demands

\*Certificates 504-D and 548-A submitted for and received Certificates of Change in 2016. The Report of Examination for Water Right Change specific to each certificate is included in Appendix 3.5. Under this change, the place of use of the water right is anywhere within the City's service area so long as the water system is and remains in compliance with the criteria in <u>RCW 90.03.386(2)</u> rather than the place of use is tied to a specific well location. All other City water rights certificates remain unchanged and have the place of use designated as described in the table above.

\*\* Baxter Well water rights officially decommissioned in 2003, with water rights transferred to the Ray Street Well, as shown. The priority date is January 12, 1945.

\*\*\*Havana Well Station is in construction and not operational; therefore, no observed production data is available and no specified maximum rate or maximum volume per site was specified.

- NOTE: The above chart is pulled from the City of Spokane's 2023 Water System Plan (updates required every 6 years).

## SECTION 8 OF ECOLOGY POLICY 2030 - INCHOATE WATER

Policy 2030 is Ecology's Municipal Water Law Policy and Interpretive Statement and provides guidance on how to handle transfers of municipal water rights.

## Section 8: Transfer/Sale of Inchoate Municipal Water Rights to Another Entity

Transfers of water rights for municipal water supply purposes to another entity must meet the requirements under RCW 90.03.380 for surface water rights and RCW 90.44.100 for groundwater rights (see Section 5, Changing Municipal Water Rights). For these transfers, Ecology evaluates the right to determine if the inchoate quantities are in good standing and eligible for change/transfer.

### 8.1 Surface Water Certificates

Generally, only the perfected quantities "which have been applied to beneficial use" per RCW 90.03.380(1) are valid for transfer to another entity. Inchoate quantities may be transferred if they can meet the additional requirements of RCW 90.03.570. When holders of surface water rights for municipal water supply purposes apply for transfer to another entity, Ecology conducts a tentative determination of extent and validity.

#### 8.2 Groundwater Certificates

RCW 90.44.100 could allow the perfected and inchoate portions of groundwater permits or certificates for municipal water supply purposes to be transferred to another entity. This policy focuses on certificates, while changing or transferring groundwater permits is covered in Ecology POL-1260.<sup>12</sup>

When holders of groundwater certificates for municipal water supply purposes apply for a transfer to another entity, Ecology conducts a tentative determination of extent and validity. Ecology determines whether any inchoate quantities remain in good standing and valid for transfer based on the original intent described in the water right authorization as well as subsequent changes to the place of use through modification of the service area in a Department of Health approved planning or engineering document. Ecology also evaluates whether reasonable diligence to develop the water right has occurred and if the transfer would be detrimental to the public welfare.

• <u>Note</u>: It was last updated in Nov. 2024 and is available in full here: https://apps.ecology.wa.gov/publications/documents/2411100.pdf

# RELEVANT CASE LAW FOR THE ROUND TABLE DISCUSSION ON COST OF FUTURE INFRASTRUCTURE:

A governmental entity (including water purveyors) can impose conditions on development, including dedication of land, infrastructure, money to pay for such items, and fees.

- Hillis Homes, Inc. v. Pub. Util. Dist. No. 1 of Snohomish Cnty., 105 Wn.2d 288, 301, 714 P.2d 1163, 1170 (1986)
  - A utility may charge reasonable fees to customers and may have "[d]ifferent classes of customers may be charged different rates as long as the classifications themselves are reasonable."
- Irvin Water Dist. No. 6 v. Jackson P'ship, 109 Wn. App. 113, 120–21, 34 P.3d 840, 845 (2001)
  - "No municipal corporation is bound by a connection fee schedule for service to be provided at a future date unless there is a contract to provide such service at that rate."
  - A developer does "not have a vested right in any particular fee schedule, at least before application and payment of the applicable connection fees."

However, there are Nollan / Dolan constitutional limitations on the conditions imposed on real estate development:

- Nollan v. California Coastal Comm'n, 483 U.S. 825, 837, 107 S. Ct. 3141, 3148, 97 L. Ed. 2d 677 (1987)
  - Conditions imposed on development need to have an "essential nexus" or a connection between the development and the condition imposed, otherwise it will be an unconstitutional taking.
- Dolan v. City of Tigard, 512 U.S. 374, 391, 114 S. Ct. 2309, 2319–20, 129 L. Ed. 2d 304 (1994)
  - "We think a term such as 'rough proportionality' best encapsulates what we hold to be the requirement of the Fifth Amendment. No precise mathematical calculation is required, but the city must make some sort of individualized determination that the required dedication is related both in nature and extent to the impact of the proposed development."
- Koontz v. St. Johns River Water Mgmt. Dist., 570 U.S. 595, 619, 133 S. Ct. 2586, 2603, 186 L. Ed. 2d 697 (2013)
  - "We hold that the government's demand for property from a land-use permit applicant must satisfy the requirements of *Nollan* and *Dolan* even when the government denies the permit and even when its demand is for money."
- Sheetz v. Cnty. of El Dorado, California, 601 U.S. 267, 279, 144 S. Ct. 893, 902, 218 L. Ed. 2d 224 (2024)
  - Legislatively imposed fees on development are subject to Nollan/Dolan analysis.
