

Graduated in electrical engineering, working in DATA for over 20 years, following the evolution of data and technologies during that time. I've been serving DAMA Brazil since 2020, CDAO at DASA (in Brazil), MBA Data Governance instructor at FIAP Institute, My goal is to lead the growth in knowledge of the importance of Data Governance, especially in Brazil, through training actions, certifications, workshops, in-person and online events at colleges and MBAs. Creating a culture among people that the correct and conscious use of data, in an ethical manner, will bring benefits both to their personal lives and to their corporate results. Considering the current world we live in, with so many connected devices and real-time data, making quick and safe decisions is no longer a choice or option, but a necessity, whether with data from your car's sensors, your wristwatch, or a strategic decision for a new product or service in the company. And to have these results and insights, we need the foundation and appropriate processes for managing this data to be well established and implemented. I hope to contribute with by experience as CDAO and learn with DAMA International partners to improve DAMA Brazil chapter later.
