OFFICE OF THE SECRETARY OF STATE
DRIVER SERVICES DEPARTMENT
2701 SOUTH DIRKSEN PARKWAY
SPRINGFIELD, ILLINOIS 62723

ALEXI GIANNOLIAS
SECRETARY OF STATE

11-03-2023

RAYMOND J. RAMIREZ
108 OTTAWA CT
EAST PEORIA, IL 61611

Driver's License No.: R562-7306-1108
Expiration Date: 04/15/2024

Dear Motorist,
Federal law requires the Secretary of State's Office to check your information with the National Driver Registry Problem Driver Points System (PDPS) to ensure States share key information to combat fraud and identify theft as well as improve road safety. Unfortunately, the PDPS system is showing that the Illinois driver to whom this notice is addressed has been "reported as deceased" (RPD) in the State(s) below. If the addressed Illinois driver is deceased, please contact the appropriate State(s) and send a death certificate to Central Services at the address above, so the office can update its records. We are sending this letter to you prior to your driver's license expiration date in an effort to give you time to resolve the issue in the other State(s).

To be a 'relief' veterinarian, you first must have this.

How First Impressions Work

People often say "you never get a second chance to make a first impression", and that's actually quite true—which is why it's so important to start on the right foot.

First Impressions: Making Up Your Mind After a 100-ms Exposure to a Face

Janine Willis and Alexander Todorov | View all authors and affiliations

Abstract

People often draw trait inferences from the facial appearance of other people. We investigated the minimal conditions under which people make such inferences. In five experiments, each focusing on a specific trait judgment, we manipulated the exposure time of unfamiliar faces. Judgments made after a 100-ms exposure correlated highly with judgments made in the absence of time constraints, suggesting that this exposure time was sufficient for participants to form an impression. In fact, for all judgments—attractiveness, likeability, trustworthiness, competence, and aggressiveness—increased exposure time did not significantly increase the correlations. When exposure time increased from 100 to 500 ms, participants' judgments became more negative, response times for judgments decreased, and confidence in judgments increased. When exposure time increased from 500 to 1,000 ms, trait judgments and response times did not change significantly (with one exception), but confidence increased for some of the judgments; this result suggests that additional time may simply boost confidence in judgments. However, increased exposure time led to more differentiated person impressions.

What about the human studies

BMJ Open Understanding patient preference for physician attire: a cross-sectional observational study of 10 academic medical centres in the USA

From the Department of Population Medicine, Ontario Veterinary College, University of Guelph, Guelph, ON N1G 2W1, Canada.

OBJECTIVE
To examine companion animal owners' perceptions of appropriate veterinarian attire and investigate potential associations between a veterinarian's attire and clients' ratings of trust in, confidence in, and comfort with a veterinarian.

SAMPLE
449 pet owners.

PROCEDURES
Participants were randomly assigned to complete a questionnaire containing photos of a male or female model veterinarian photographed in 8 at-

BMJ open – March 2018

- 4062 patients

Measurements

Ratings regarding how knowledgeable, trustworthy, caring and approachable each physician appeared, as well as how comfortable the physician made the respondent feel, were measured using a 1–10 scale, where 1 indicated 'somewhat preferred' versus 10 'extremely preferred.'

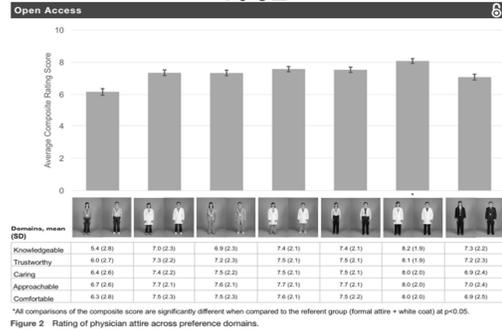

JAVMA June 2020

In human medicine, physician attire has been found to affect patients' trust,^{6,9,10} confidence,^{4,6,8,11} and comfort,^{6,8,9,11} with most research identifying patients' perceptions of trust or confidence being positively impacted when physicians are seen in attire that includes a white laboratory coat.^{4,6,8–10} In addition,

Although patients' perceptions of physician, nurse, psychiatrist, and dentist attire have been investigated extensively in the literature,^{3,4,6,8,15–17} to the authors' knowledge, research focused specifically on clients' perception of veterinarians' attire has only just begun to receive attention.^{18,19} Given the unique

Example of what I used prior to

2007

Treatment form for Lakeview Veterinary Clinic sent August 25, 2015

Ear infection, first time: Ear smear; then appropriate ointment in ear bid x 10. phone check in 3 day; if severe possible, recommend inj of vetrolg – have staff give price before doing

Ear infection, recurring: smear, and above, but discuss food trial and why food relates to skin/ ears, and go over food trial handout

When do you recommend any surgery (Modified Zapp' trial allowed)? *** not needed any more

Treatment for Ear Mites: Clean ears, Revolution 3x, then check ears in 6 weeks.

Allergic Dermatitis: discuss with client either Depo if seasonal or oral Pred. Go over steroid sparing strategy handout

Full anal glands: express – if necessary infuse with antibiotic ointment

Mismating: rec OHE or have pups

Upper Respiratory Infection felinae: Inj AB, then Rx either liquid Clavamox or tablet check back in 7-10 day

Anesthetics/ pain management: Premed with Rindogyl

Dog OHE: Premed Rindogyl, ace glyco and induce with Ket/Midazolam, Intubate and maintain on Iso. In surg if not laser, local with lidocain bupivacaine.

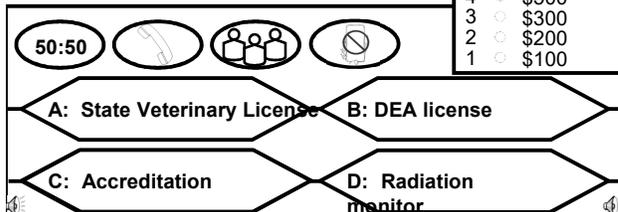

Cat Dechow: Anesthetic same as cat OHE

Cat OHE: Inj Ket/dex/rob-IM. Metazum at 1/2 dose on

This is the license Not needed if you need to take an x-ray on patient seizing and but not traveling to Canada

Revised 7 February 2012
Available online xxxx

ABSTRACT

We introduce the term “enclothed cognition” to describe the systematic influence that clothes have on the wearer’s psychological processes. We offer a potentially unifying framework to integrate past findings and capture the diverse impact that clothes can have on the wearer by proposing that enclothed cognition involves the co-occurrence of two independent factors—the symbolic meaning of the clothes and the physical

What about...

- An Illinois Controlled Substance License?
 - Needed per location the Dr will be administering or prescribing drugs from
 - Locum tenens can use their home office location as the CS license in IL.

As an Independent Contractor under IRS rules, a 1099 should be issued if someone is paid more than:

15	○	\$1 Million
14	○	\$500,000
13	○	\$250,000
12	○	\$125,000
11	○	\$64,000
10	○	\$32,000
9	○	\$16,000
