EIA: CONNECTING THE INDUSTRIES THAT DEFINE THE DIGITAL AGE

The Electronic Industries Alliance (EIA), now in its 75th year, is the leading national trade organization representing U.S. electronic manufacturers—the nation's largest manufacturing sector at \$500 billion. Committed to the competitiveness of the American producer in the global marketplace, EIA represents the entire spectrum of companies involved in the design and manufacture of electronic components, parts, systems, and equipment for communications, industrial, government, and consumer uses.

Originally founded in 1924 as the Radio Manufacturers Association, EIA has maintained a quick reaction capability to recognize problems, which are common to the industry or segments of the industry, and to mount action programs leading to the solution of these concerns. Due to its broad representation and its reputation for constructive action, EIA is both nationally and internationally recognized as the spokesperson for the electronic industries.

Membership - At the present time, EIA is comprised of over 2,100 member companies belonging to one or more sectors. EIA membership is open to all companies manufacturing electronic products in the United States. Certain other organizations may be admitted as "associate" EIA members. In addition, other groups may seek to partner with EIA and become a sector-specific association under the Alliance umbrella.

Administration - Broad EIA policy is established by a Board of Governors whose members are elected by the various sectors of the Alliance. The EIA Executive Committee oversees programs delegated to it by the Board. An experienced, professional staff of nearly 250 persons, headed by President Dave McCurdy, serves the Alliance and its members from a headquarters building located in Arlington, Virginia.

Organization - Organized along product lines, EIA is a federation of associations and sectors around which most of the Alliance's work revolves. These associations and sectors provide the concentrated and specialized attention required by the issues facing different facets of the electronic industries. Each association and sector implements its own activities to meet the needs of its industry. As currently configured, the Electronic Industries Alliance includes: the Consumer Electronics Manufacturers Association (CEMA); the Electronic Components, Assemblies, Equipment & Supplies Association (ECA); the Electronic Information Group (EIG); the Government Electronics and Information Technology Association (GEIA), the JEDEC Solid State Technology Association (JEDEC SSTA); and the Telecommunications Industry Association (TIA).

EIA corporate departments provide services in marketing statistics, engineering standards, legislative and regulatory information, government relations, and public affairs. Services and programs of a broad nature that benefit the entire industry also are provided to the EIA membership through Board of Governors-sponsored programs. The services of all EIA departments, including administration, legal, accounting, and document production services are available to each Alliance association or sector.

For more information, visit EIA's web site at
<http://www.eia.org>.

A SUMMARY OF THE EIA STANDARDIZATION PROGRAM

The EIA Engineering Department operates a comprehensive standardization program as evidenced by over 1,500 standards and publications currently available through EIA's primary distributor, the IHS Group and its Global Engineering Documents. These documents have been prepared and revised by more than 5,000 materially or directly affected industry, government, and consumer representatives who participate in the Engineering Department's committees and other sector or group standards-setting bodies.

EIA standards development activity is conducted through panels, councils, committees, and working groups made up of interested persons from EIA member and nonmember companies, government agency, academe, and others. Following a prescribed consensus process, public review and comment, and management review, the documents are published as either EIA standards or publications.

Many EIA Standards become American National Standards (ANSI/EIA) through an organizational accredited development and approval process. Many of these national standards form the basis of U.S. positions in international standards development in the International Electrotechnical Commission (IEC) and International Organization for Standardization (ISO).

With reference to source and date code markings, a number of standards and publications have been adopted or are under development. EIA-476 is the original EIA Standard that outlined requirements for the source and date code marking on electronic components and described the assignment of component manufacturer identification numbers and their sequence on the component to be marked along with the lot date code. Today, EIA-476-B is the standalone EIA standard for "date code marking". While EIA-476-A continues to serve as the source code marking, it currently is under revision as EIA Standards Proposal SP-3705A.

All standards and publications are made available for sale from Global Engineering Documents. All EIA standards and publications from across the entire Alliance are listed in the "1999 Catalog of EIA Standards and Publications" and is available from Global Engineering Documents in hard copy or CD-ROM at: **1-800-854-7179**

EIA SOURCE AND DATE CODE BOOK

1. What is the EIA Source Code?

It is a numeric symbol assigned and registered by EIA Headquarters that may be stamped or marked on any or all products to identify the production source or the vendor assuming product responsibility.

In addition, the EIA code provides for adding numerals to the source code symbol to identify the year and week of production.

2. How does the date code work?

In addition to a source code, the date of production may be desired. This can be accomplished by adding, following a hyphen (-), the last two digits of the production year plus the number of the week of that year.

A hypothetical example of the application of the EIA date code to the source code follows: A company is assigned the source code 113. To this are added two digits for the year - such as "99" for the current year, or "00" for 2000 - and another two digits for the week of the year. In this case, the combined source and date codes would be:

113-9910

This would represent the company's number "113" plus "99" for 1999, the production year, and "10" for the week of March 7-13, the production week. For easy identification of the week, the date code tables shown in the back of this booklet give the number of each week in both 1999 and 2000.

If a component manufacturer is unable to use the four-digit date code, and an alternate three-digit code may be used by taking only the last digit of the year. The example above would then become:

113-910

3. To who is the EIA service available?

The registration of a source code is an EIA service available to all manufacturers of electronic equipment and components. For this service, an annual registration fee of \$75 is assessed per EIA source code issued or member companies and \$150 for non-member companies to cover administrative and production costs.
