

Integrating your company's sustainability goals with your corporate strategy is a key Kinect Energy strength; services are grouped as follows:

- ▼ Renewable energy opportunities
- ▼ In-depth energy assessments
- ▼ Extensive sustainability services

Kinect Energy's sustainability consulting services will assist you in assessing your corporate sustainability strategy and the measurement and reporting of related programs. We also recommend and develop sustainability opportunities which can occur as a result of energy market trends, new technologies, government regulations, economic conditions, and changes in your company's infrastructure.

Sustainability services

- | | |
|-------------------------------------|--|
| ▼ Corporate sustainability strategy | ▼ Baseline development & benchmarking |
| ▼ Carbon mitigation strategy | ▼ Energy and carbon metrics |
| ▼ Carbon market compliance strategy | ▼ Carbon footprint development |
| ▼ Policy and issue intelligence | ▼ Sustainability Reporting (e.g. CDP, GRI) |

COMPREHENSIVE STRATEGY DEVELOPMENT TO FULFILL GOALS & OBJECTIVES

Renewable energy

- ▼ Solar and renewable energy opportunity assessment (single and portfolio analysis)
- ▼ Renewable RFP development, contract negotiation and review
- ▼ Review of renewable energy incentives and financing structures
- ▼ Renewable Energy Certificate (REC) sourcing to meet green energy or carbon reduction goals
- ▼ Renewable energy monetization: we help find the highest return for renewable energy commodities and monetize your environmental attributes

Triple bottom line

Corporate sustainability is often defined by a Triple Bottom Line made up of economic, environmental, and social performance. It is at the intersection of the economic and environmental domains where Kinect Energy can leverage its world class skills and experience as an energy manager to achieve your sustainability objectives. We serve as a consultative manager to help companies develop and implement plans to reduce costs, increase efficiency, and demonstrate results.

Water and wastewater services

Water is unique in that you pay for it when it comes into the facility (supply charges) and when it leaves the facility (wastewater charges). There are three services offered under the Kinect Energy umbrella that can be used to help reduce your administrative costs, identify cost savings and find efficiencies in your water management programs; they are:

- ▼ Data management and reporting
- ▼ Water savings analysis
- ▼ Water conservation assessments

Energy assessments

A full scale energy assessment will provide your organization with an objective, comprehensive review of opportunities to reduce energy consumption at your facility. A Level 1 Assessment is a good tool for getting a handle on baseline energy usage and the energy saving potential of a facility. Level 2 and Level 3 assessments provide a more in-depth look at energy use and the potential energy savings from more capital intensive projects.

Why invest in an assessment?

- ▼ Reduce your overall energy spend
- ▼ Provide a baseline for tracking performance of energy management activities over time
- ▼ Informed short and long-term energy planning
- ▼ Reduce exposure to energy price volatility
- ▼ Identify repeatable equipment and operational improvements
- ▼ Improved energy efficiency also helps achieve environmental goals such as carbon footprint reduction
