### **AMFP Launches Greater St. Louis Chapter to Support Healthcare Built Environment Professionals**

St. Louis, MO — The Association of Medical Facility Professionals (AMFP) proudly announces the official launch of its newest chapter, the 34th chapter of the organization, in St. Louis, Missouri, effective June 19, 2025. This expansion marks an important step forward in supporting the region's healthcare built environment leaders—bringing together professionals from across planning, design, construction, and operations.

Planning for the St. Louis Chapter began in the summer of 2024, led by a diverse group of industry professionals who recognized the need for a dedicated local platform to collaborate, educate, and drive innovation in healthcare facility development.

“St. Louis is home to some of the nation's most respected healthcare institutions and facility leaders. The launch of the AMFP St. Louis Chapter creates a vital hub for knowledge-sharing, relationship-building, and shaping the future of our industry,” said Paul Sabal, AMFP St. Louis President & Founding Member of the St. Louis Chapter.

AMFP's mission is to serve as the hub where healthcare built environment leaders share ideas, gain knowledge, solve challenges, connect with peers, and influence the future of the industry. The new St. Louis Chapter will offer local programming, networking events, and leadership opportunities tailored to the needs and interests of professionals in the region.

The chapter is open to professionals across the healthcare built environment, including facility managers, architects, engineers, contractors, developers, and consultants.

To learn more about the AMFP Greater St. Louis Chapter or to get involved, visit [www.amfp.info](http://www.amfp.info).

#### **About AMFP:**

The Association of Medical Facility Professionals (AMFP) is the only professional membership organization dedicated to enhancing the healthcare built environment. Through local chapters and national resources, AMFP supports those who design, build, and maintain healthcare facilities—ensuring safe, effective spaces for care to happen.
